Advanced Cognitive Analysis Report

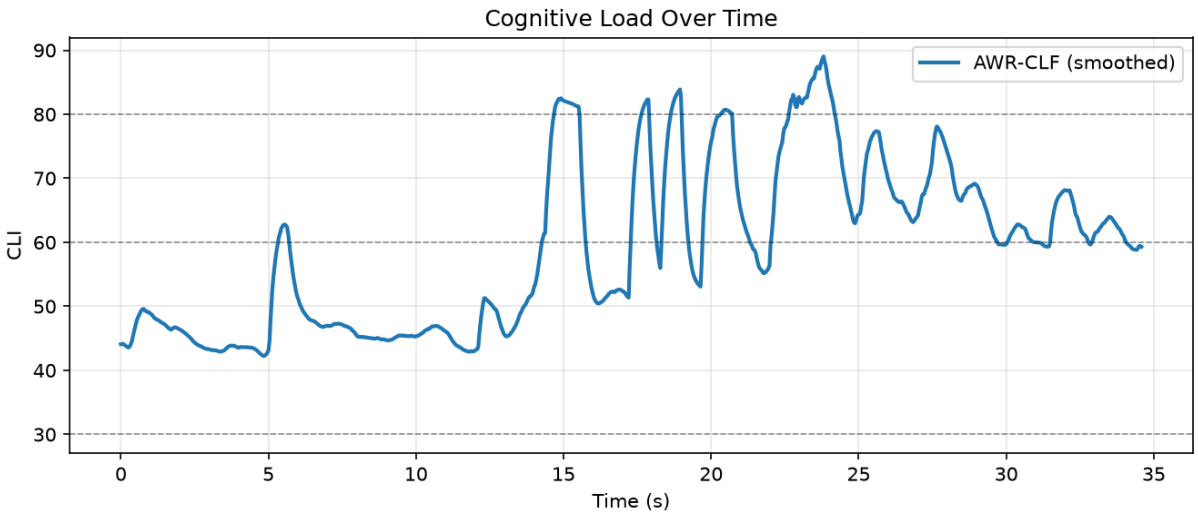

Session Summary

Metric	Value
Monitoring mode	Interview Monitoring
Duration / frames	34.6 s / 1028 frames (29.7 fps)
Focused / Overload / Fatigue	47.2% / 48.0% / 4.9%
Average / Peak CLI	59.3 / 89.0
Cognitive stability	74.1%
Longest continuous focus	14.6 s
AWR-CLF weights (F / D / S)	0.68 / 0.24 / 0.09
Attention (on-screen / eye contact)	94.4%
Monitoring events	0
Mean |yaw| / |pitch|	10.8 / 11.9 deg

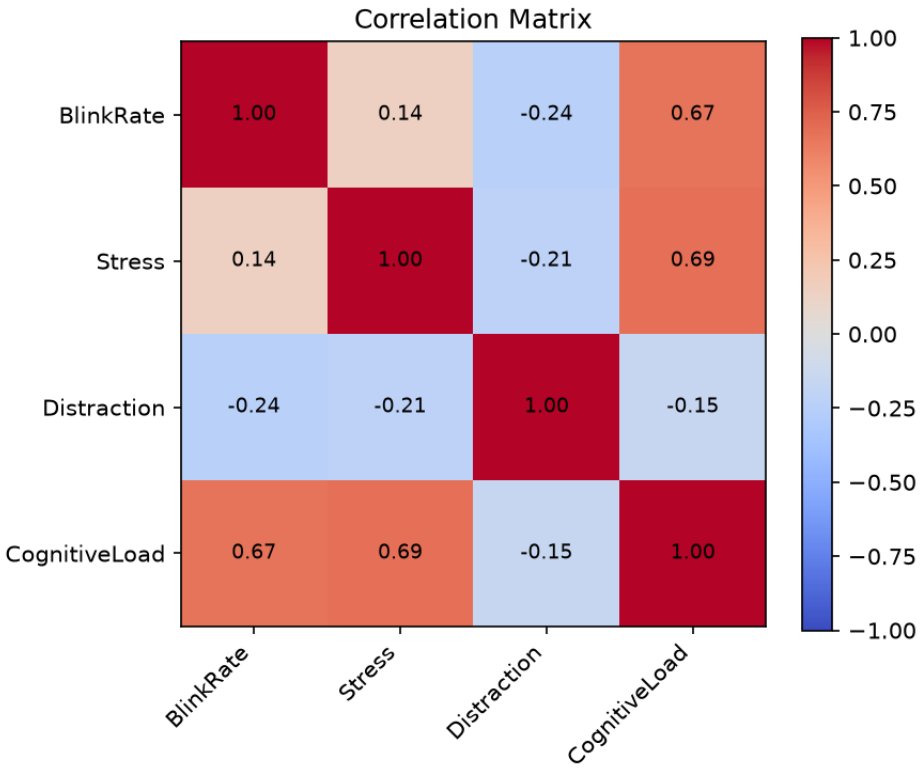

Insights

- Frequent cognitive overload (48.0% of session).

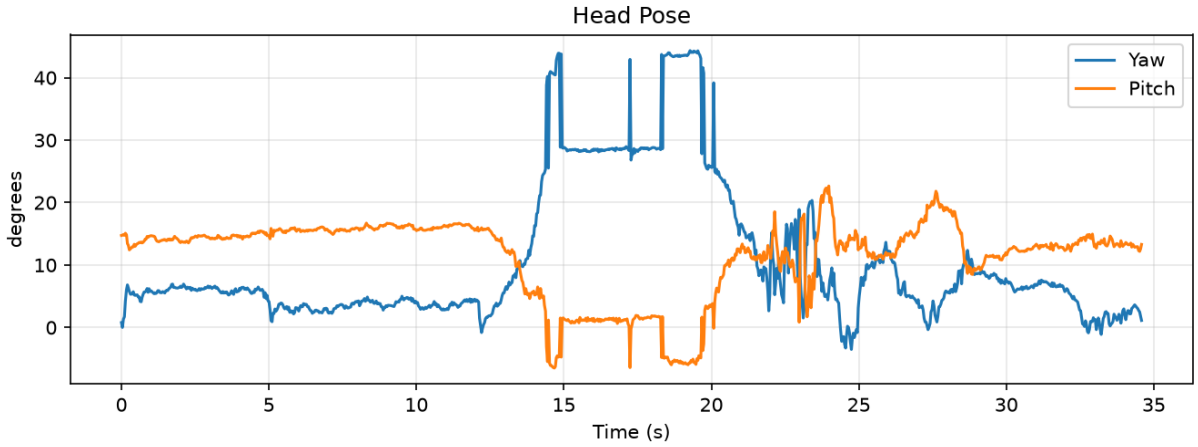

Cognitive Load Trend

Correlation Analysis

Head Pose

Method note

CLI is computed with AWR-CLF: personal-baseline ratios of blink rate, gaze deviation and head micro-movement are fused with dataset-calibrated inverse-variability weights, scaled by per-frame reliability and smoothed with an exponential moving average. CLI = 50 at the personal baseline. It is a heuristic composite index, not a clinically validated measure.
